COMMERCIAL & TECHNICAL PROPOSAL

Driver Dedicated Virtual Account & Wallet Mobile App

Native React Native (Expo) Android & iOS Mobile Wallet with Central Settlement Web Dashboard

PREPARED FOR (CLIENT / TRANSPORT FINTECH)
Executive Fleet & Settlement Directorate
Attn: Managing Director & Operations Team

PROJECT SCOPE & DELIVERABLES
Mobile Wallet & Web Settlement Console
React Native iOS/Android App + Web Settlement Console

1. PROJECT OBJECTIVE & STRATEGIC VISION

The objective of this engagement is to design, develop, deploy, and scale a specialized mobile fintech wallet application purpose-built for commercial transport drivers (cabs, interstate buses, tricycles, dispatch riders, and haulage truckers).

In the Nigerian cash-to-digital mobility landscape, commercial drivers face major operational friction with bank transfers:

- Traditional personal bank accounts fail to deliver immediate alerts while driving.
- Drivers waste time waiting for bank SMS alerts or asking passengers to show debit screens, leading to traffic blockages and vulnerability to fake transfer receipts.
- Mixing personal finances with daily operating cash creates accounting chaos for fleet managers and transport unions.

This platform solves these challenges by automatically provisioning every driver with a unique, dedicated Nigerian bank account number (dynamic NUBAN via Paystack Dedicated Virtual Accounts, Monnify, or Moniepoint Microfinance Bank) registered in their name. When a passenger transfers money, the driver's in-app wallet is credited in real time via sub-second cloud webhooks, triggering an immediate loud audio chime and spoken voice credit alert so the driver confirms payment safely while operating the vehicle.

2. FUNCTIONAL SYSTEM MODULES

Module 1: Driver Mobile Application (React Native / Expo: Android & iOS)

Driver Mobile App

- **Driver Onboarding & Identity Verification (KYC):** Quick phone-number authentication (SMS OTP via Termii), full legal name capture, and automated BVN/NIN verification required by CBN regulations to issue dedicated virtual NUBAN accounts.
- **Dedicated Virtual Bank Account Desk:** Prominent display of driver's dedicated bank account number (Wema, Sterling, or Moniepoint MFB) and account name, with one-tap copy button for fast sharing.

- **Printable & Displayable QR Code:** Generates a high-contrast QR code matching the driver's payment credentials that can be laminated and displayed on the vehicle dashboard, sun visor, or headrest.
- **Instant Wallet & Audible Credit Alerts:** Sub-second wallet balance updates via webhooks, accompanied by a loud chime and spoken voice notification (e.g., *"Payment received: Two Thousand Naira"*) for eyes-on-the-road safety.
- **Instant Payout & Bank Withdrawal:** Link verified personal settlement bank account (NUBAN check with instant name verification), with one-tap instant withdrawal and automated midnight sweep options.
- **Double-Entry Transaction Ledger:** Complete chronological transaction history filtering incoming passenger transfers, platform service deductions, and bank withdrawals.

Module 2: Central Administrative & Settlement Dashboard (Next.js Web Portal)

`Web Admin Desk`

- **Driver Account Ledger & KYC Auditing:** Master registry of all registered drivers, verified identity credentials, active virtual account mappings, and current wallet balances.
- **Live Inflow & Webhook Settlement Monitor:** Real-time ledger recording every incoming passenger bank transfer, matched webhook transaction reference, and outbound withdrawal request with search/filter tools.
- **Automated Commission & Platform Fee Engine:** Configurable monetization engine to deduct a platform fee per incoming transfer (flat ₦50 or percentage split such as 2% to 5%) prior to crediting the driver's spendable wallet balance.
- **User Controls, Risk Mitigation & Dispute Desk:** One-click wallet freeze/unfreeze controls for fraud prevention, investigation console for disputed transfers, and one-click CSV export of transaction ledgers.

3. PROPOSED TECHNICAL ARCHITECTURE

The platform is engineered on an enterprise, bank-grade architecture maintaining strict double-entry ledger integrity:

- **Mobile Application (Driver Client):** Built using **React Native (Expo)** with TypeScript. Compiles to native binary packages for **Google Android** (.apk/.aab) and **Apple iOS** (.ipa), featuring native audio engines and background push notification listeners.
- **Web Admin Console:** Built with **Next.js 15 (React)** styled with Tailwind CSS, delivering a responsive desktop and tablet portal for settlement officers.
- **Backend API & Webhook Dispatcher:** Engineered in **Node.js (NestJS)** deployed on high-availability cloud infrastructure with idempotent webhook handlers to guarantee zero duplicate credits.
- **Database & Ledger: PostgreSQL** relational database with strict ACID transaction boundaries and double-entry bookkeeping ledgers to eliminate phantom balances.
- **Banking Partner Infrastructure:** Direct API integration with **Paystack Dedicated Virtual Accounts (DVA)** or **Monnify Reserve Account APIs** for automated, compliant NUBAN provisioning.

4. ESTIMATED RUNNING & THIRD-PARTY OPERATIONAL COSTS

Third-party infrastructure and banking fees are paid directly by the client to service providers at transparent cost:

Infrastructure / Service	Operational Purpose	Estimated Initial Cost
Cloud Server & DB (Railway.app)	Runs API backend, webhook listeners, and PostgreSQL ledger	`$5.00 - $10.00 / month`
Virtual Account Inflow Fee	Bank transfer processing fee charged by fintech provider	`~1.0% to 1.5% capped (Standard rate)`
SMS OTP Verification (Termii)	Driver telephone authentication and security PINs	`Pay-as-you-go (~₦5.00 per SMS)`
Custom Domain & SSL Protection	Brand domain name (.com or .ng) with Cloudflare SSL	`~$15.00 - $25.00 / year`
Google Play Developer Account	One-time Android publishing registration fee to Google	`$25.00 (One-time fee to Google)`
Apple Developer Program (iOS App Store)	Annual iOS publishing registration fee to Apple	`$99.00 / year (Direct to Apple)`

5. COMMERCIAL INVESTMENT & PAYMENT SCHEDULE

TOTAL PROJECT INVESTMENT

₦650,000

Delivery Timeline: 3 to 4 Weeks

React Native iOS/Android App + Web Settlement Desk

Milestone	Deliverable Description	Payment Percentage & Amount
1. Mobilization Deposit	Technical system architecture, database schema design, React Native mobile project setup, and complete UI/UX responsive screen designs for driver app.	`50% (₦325,000)`
2. Integration & Staging Milestone	Successful integration of the banking API, virtual account generation, webhook credit listener, and staging withdrawal testing.	`30% (₦195,000)`
3. Production Handover & Store Build	Final production build export, Web Admin Dashboard live deployment, staff training, and handover of documentation.	`20% (₦130,000)`

6. POST-LAUNCH WARRANTY & ACCEPTANCE

Following production handover, Sales Cowboy provides **thirty (30) days of complimentary technical warranty support** covering software bug resolutions, server uptime surveillance, and administrative staff onboarding.
