COMMERCIAL & TECHNICAL PROPOSAL

Unified Logistics, Bank-Factored Haulage Transaction Engine, Consultant Licensing & Fleet Equipment Ecosystem

Enterprise 4-Portal Architecture & Mobile Fleet Verification Suite

PREPARED BY (DEVELOPER)

SALES COWBOY MARKETING SOLUTIONS

Ama-wire Ishi-Uzo, Roadsafety Junction, Egbu Road, Owerri, Imo state
Clinton Chukwunyere • Lead Developer / Technical Director • GTBank: 3006086291

PREPARED FOR (CLIENT)

PROJECT54 ENTREPRENEURS

Attention: Mr Lawson Israel (Lead Executive / Managing Director)
Lagos, Nigeria

1. EXECUTIVE SUMMARY & MULTI-TIER ARCHITECTURE

To modernize commercial haulage in Nigeria, eliminate freight capital gridlock, integrate statutory risk mitigation, and structure protected broker/consultant networks, this platform is engineered as an enterprise-grade **multi-tier digital ecosystem** purpose-built for **PROJECT54 ENTREPRENEURS**:

- **The Contractor & Freight Dispatch Hub:** Enables verified cargo owners (Contractors) to post structured freight manifests with live capacity countdown decrementing logic, automated 24-hour Expression of Interest (EOI) expiration timers, and integrated Goods-in-Transit (GIT) policy procurement.
- **The Transporter Fleet Vault & Gate-In Countdown Engine:** Comprehensive vehicle profiling with mandatory truck video verification proofs, and a strict **48-Hour Depletion Clock** that revokes job allocations if trucks fail to gate-in at loading depots on time.
- **The Secure In-App Chat & Anti-Circumvention Engine (Disintermediation Shield):** Real-time in-app communication between truckers and contractors for operational coordination (dock loading status, ETA, directions) fortified with an automated contact-redaction filter that blocks phone numbers, emails, bank accounts, and off-platform dealing to guarantee 100% platform retention.
- **The Accredited GIT Insurance Underwriters Desk:** Direct integration of licensed Goods-in-Transit (GIT) insurance companies into the freight lifecycle, enabling instant digital policy underwriting, automated per-trip premium deductions, and streamlined electronic claims verification.
- **The Bank & Institutional Financing (Factoring) Desk:** A secure financial underwriting portal where accredited banks review verified loading and offload waybills directly to disburse milestone freight financing and execute automated multi-way split deductions.
- **The Consultant Onboarding & Quota Desk:** A closed-loop referral and licensing engine where authorized freight consultants pay an onboarding fee, operate under dynamic client quota caps, and earn automated commission splits.
- **The Heavy Equipment Leasing Engine:** A full 14-step industrial machinery charter workflow (cranes, excavators, forklifts, lowbeds, barges) with inspection video archives, lease agreements, and caution deposit escrow.
- **The Automobile & Heavy-Duty Spare Parts Marketplace:** A dedicated B2B e-commerce catalog for prime movers, flatbeds, tippers, and genuine truck components backed by inspection-based escrow settlement.

2. DETAILED MODULE BREAKDOWN

Module 1: Consultant Onboarding & Quota Desk `Licensing & Quotas`

Monetizes consultant network access and enforces closed-loop broker referral chains.

- **Paid Consultant Licensing:** Mandatory activation fee via Paystack/Moniepoint to unlock consultant dashboard and referral links.
- **Closed-Loop Referral Engine:** Contractors and Transporters can register *only* via an authorized Consultant's invitation link.
- **Account Cap Enforcement:** Admin-configured quotas limiting how many active Contractors and Transporters a single consultant can manage.
- **Automated Commission Engine:** Automatically routes consultant splits on completed trips, leases, and vehicle sales to their wallet.

Module 2: Contractor & Job Dispatch Hub `Dispatch Engine`

Structured cargo posting with live capacity decrementing and expression-of-interest expiration.

- **Structured Haulage Manifests:** Post cargo briefs detailing consignment type, geofenced loading/offloading coordinates, vehicle configuration, tonnage, trip rate, and mandatory GIT insurance.
- **Capacity Decrementing Logic:** Remaining capacity counts down in real time as transporters commit trucks (e.g., Job requires 20 flatbeds → Transporter A commits 5 → 15 remaining).
- **24-Hour EOI Timer:** Transporter expressions of interest automatically expire and release truck holds if not approved within 24 hours.

Module 3: Transporter Fleet Vault & 48-Hour Gate-In Clock `Fleet Verification & Anti-Hoarding`

Asset video verification and automated allocation revocation countdown engine.

- **Fleet Asset Onboarding:** Vehicle profile logging plate numbers, mandatory 360-degree truck walk-around video proof uploads, driver licenses, proofs of ownership, and verified bank accounts (NUBAN).
- **The 48-Hour Depletion Clock (Anti-Hoarding & Operational Assurance):**
  • *Trigger & Visual Countdown:* Once a transporter's truck commitment is accepted, an automated 48-hour countdown state machine activates. Both parties see real-time UI countdown badges with proactive automated SMS/WhatsApp alerts delivered at T-24h, T-12h, and T-2h before expiry.
  • *Geofenced Depot Gate-In Verification:* To halt the clock and confirm arrival, the assigned truck and driver must physically arrive at the specified loading terminal/depot. Gate-in is validated via 150m GPS geofenced proximity pings, driver app QR depot scan, or depot security digital check-in.
  • *Automated Default & Instant Capacity Release:* If the timer reaches 00:00:00 without verified depot gate-in, the system automatically revokes the allocation without penalty to the contractor, immediately returns the vacated truck capacity to the open dispatch pool for waitlisted transporters to claim, and applies a reliability strike to the defaulting transporter's scorecard.
- **Dual-Stage Waybill Verification:** Stage 1 (Loading Waybill) verification with weighbridge receipt triggers initial advance payout; Stage 2 (Proof of Offloading / e-POD) triggers final multi-way balance settlement.

Module 4: Secure In-App Chat & Anti-Circumvention Engine `Disintermediation Shield`

Encrypted in-app messaging between truckers and contractors with automated contact obfuscation.

- **Transaction-Bound Messaging:** Real-time in-app communication thread between contractor and assigned trucker scoped strictly to active job manifests for dock updates, ETA, and gate directions.
- **Automated Contact Redaction (AI & Regex Filter):** Automatically scrubs and blocks personal telephone numbers (Nigerian formats: 080, 081, 070, 090, 091, +234, spelled-out digits), personal emails, WhatsApp links, bank accounts (NUBAN), and external URLs.
- **Disintermediation Protection & Compliance Flagging:** Prevents truckers and contractors from transacting off-platform; automatically flags circumvention attempts to the Master Admin dashboard.
- **Masked Relay Audio Channels:** Optional in-app VoIP or virtual masked call routing keeping personal contact numbers 100% confidential.

Module 5: Accredited GIT Insurance Underwriting & Claims Desk `Insurance Underwriters`

Integrated insurance company portal for instant digital policy issuance, premium splits, and claims.

- **Institutional Insurer Onboarding:** Dedicated portals for licensed insurance underwriters (Leadway, AIICO, Cornerstone, NEM) to audit cargo risk and manage policy issuance.
- **Dynamic Risk Matrix & Instant Trip Binders:** Automated policy generation linked to trip value and route hazards, issuing electronic certificates of insurance prior to depot departure.
- **Automated Premium Deduction:** Split settlement automatically carves out insurance premiums at source and remits directly into the underwriter's settlement ledger.
- **Accelerated Claims Vault:** Direct insurer audit access to immutable pre-trip 360-degree inspection videos, weighbridge slips, GPS gate-in logs, and electronic POD for tamper-proof claim resolution.

Module 6: Bank & Institutional Financing (Factoring) Desk `Factoring & Underwriting`

Direct financial underwriting integration for freight liquidity and automated loan recovery.

- **Contractor-to-Bank Invitation:** Contractors invite accredited financial institutions to finance their freight pipeline with a 5-day expiry state machine.
- **Financier Disbursement Desk:** Banks inspect approved loading and offload waybill documents directly to authorize milestone disbursements.
- **Automated Multi-Way Split Deductions:** Dynamically splits financing into Transporter Payment, Platform Service Charge, GIT Insurance Premium, and Consultant Commission.

Module 7: Heavy Equipment Leasing Engine `Industrial Machinery`

Full 14-step workflow tailored for industrial plant, machinery, and maritime barges.

- **Workflow Duplication:** Tailored for cranes, excavators, forklifts, lowbeds, and barges with 360-degree video inspection archives.
- **Inspection Video Vault:** Mandatory equipment condition videos before charter commencement.
- **Lease Contracts & Escrow:** Automated equipment lease contracts, caution deposits, and maintenance logs.

Module 8: Automobile & Heavy-Duty Spare Parts Marketplace `B2B E-Commerce`

Dedicated catalog for prime movers, flatbeds, tippers, and heavy-duty replacement components.

- **Classified Marketplace:** Curated listings for commercial prime movers, flatbeds, tippers, and replacement parts.
- **Escrow Settlement:** Purchase funds held in escrow and released only upon buyer delivery sign-off.

3. ARCHITECTURAL SECURITY GUARANTEES & STATUTORY TAX ARCHITECTURE (VAT & WHT)

SYSTEM SECURITY & DATA INTEGRITY GUARANTEES

- **Role-Based Access Control (RBAC):** Strict firewall partitioning between Contractors, Transporters, Consultants, Bank Underwriters, and Super Admins. Zero cross-visibility into private margins or bids.
- **Bank Factoring Token Security:** Scoped single-use cryptographically hashed tokens with 5-day state machine expiration (max 1 resend) for bank underwriters to audit waybills without master DB access.
- **Mandatory 2FA OTP Authentication:** High-risk operations (payouts, bank details change, gate-in verification) require SMS/Email OTP (Termii engine).
- **Private Media & Document Vault:** Truck video proofs and waybills are stored in private cloud buckets with time-limited presigned URLs—never indexed on the open web.
- **Immutable Compliance Audit Trail:** Every action, countdown expiry, and status change records immutable logs with User ID, timestamp, and IP for NDPC/SCUML auditability.
- **Payment Webhook Hardening:** Paystack/Moniepoint webhooks use HMAC SHA-512 signatures to prevent replay attacks or fraudulent payment notifications.

STATUTORY FINANCIAL SYSTEM ARCHITECTURE (VAT & WHT)

Tax Liability Rules (Per Transaction):
• **VAT (7.5%):** Paid by **1 entity (Contractor)** on the platform service fee.
• **WHT (5% or 10%):** Deducted from **2 entities (Transporter & Consultant)** at source.
• **PROJECT54 ENTREPRENEURS:** Withholding agent accumulating funds for monthly FIRS/SIRS remittance.

- **Automated Withholding Tax (WHT): 5% WHT** automatically deducted on haulage trip payouts & consultant commission; **10% WHT** on equipment leases.
- **Statutory Holding Sub-Ledger:** Deducted WHT accumulates in an administrative tax holding sub-ledger with auto-generated electronic credit advices for beneficiaries.
- **Automated Value Added Tax (VAT - 7.5%):** Standard 7.5% VAT is calculated on platform brokerage charges, itemized clearly on all generated manifests and invoices.
- **Itemized Transparent Breakdowns:** Invoices show Gross Freight → Transporter Net (Loading Advance + e-POD Balance) → Consultant Cut (Net of WHT) → Platform Fee → VAT → WHT.
- **One-Click Statutory Tax Filing Reports:** One-click export of monthly CSV/Excel schedules formatted for seamless submission to the Federal Inland Revenue Service (FIRS) and State Revenue Services.

4. ESTIMATED MONTHLY RUNNING & INFRASTRUCTURE COSTS

(Paid directly by the Client to infrastructure providers; no agency markup added)

INFRASTRUCTURE / SERVICE COMPONENT	PROVIDER	ESTIMATED MONTHLY COST
Railway Cloud (API, Redis Queues, PostgreSQL DB & Storage Bucket)	Railway.app	**$10 – $20 / month** (Handles API, workers, cron timers, managed DB & video proofs)
Automated SMS & OTP Dispatch	Termii	**Pay-as-you-go** (~₦5 per notification)
Payment Gateway & Automated Split Disbursements	Paystack / Moniepoint	**1.5% capped at ₦2,000** (Per local transaction)

Total Estimated Monthly Infrastructure: ~$10 – $20 / month + usage.
**One-Time / Annual App Store Registration Fees: Google Play Console ($25 one-time), Apple Developer Account ($99/year).*

5. TOTAL PROJECT INVESTMENT & RAPID 4-WEEKS MILESTONE SCHEDULE

Due to the integration of the **Bank Factoring Portal**, **Consultant Licensing Network**, **Equipment Leasing Engine**, **Accredited GIT Insurance Underwriting Desk**, and **State-Machine Countdown Timers**, this platform delivers four distinct web portals and mobile operational interfaces across an accelerated **4-week (28 calendar days)** delivery roadmap:

MILESTONE 1 (37.5%)	MILESTONE 2 (25%)	MILESTONE 3 (37.5%)
CONTRACT EXECUTION	APP STORES DEPLOYMENT	3 MONTHS POST-LAUNCH
Mobilization Deposit (Architecture, DB Schemas, Licensing Engine & Multi-Portal UI/UX Layouts)	**Live Stores Deployment (Paid upon successful mobile app build upload & deployment on Google Play & App Store)**	**Post-Launch Operational Validation (Paid after 3 months of verified functional operational use post live deployment)**
₦750,000	**₦500,000**	**₦750,000**

CONTRACTUAL GUARANTEES & OWNERSHIP TERMS

- **100% Complete Client IP Ownership:** Upon final milestone settlement (₦2,000,000), 100% complete, exclusive, and unencumbered Intellectual Property ownership of all custom source code, mobile app codebases, backend APIs, database schemas, and admin keys vests exclusively in **PROJECT54 ENTREPRENEURS**.
- **12-Month Complimentary Technical Support & Bug-Fix Maintenance:** Includes twelve (12) months of complimentary post-launch technical support dedicated to server uptime surveillance, performance monitoring, background worker queue health, bug resolution, and **necessary code adjustments or operational refactoring where an existing feature or workflow is not functioning effectively, is sub-optimal, or requires adjustment for higher operational efficiency (e.g., refining operational logic or substituting inefficient implementations with superior alternatives)**. It strictly excludes adding entirely new standalone features, which shall be governed by separate written Change Requests (CRs).
- **Post-Warranty Annual Support Retainer (Year 2+):** Following the expiration of the initial twelve (12) months of complimentary support, ongoing enterprise technical support, system health surveillance, database optimization, and bug-fix warranty is provided at a fixed retainer fee of **₦800,000 / year (Eight Hundred Thousand Naira per year)**, payable in two equal installments: fifty percent (50% / ₦400,000) at the beginning of the year and fifty percent (50% / ₦400,000) at the end of the year.
