COMMERCIAL & TECHNICAL PROPOSAL

On-Demand Moving, Relocation & Truck Haulage Platform

Bolt & inDrive Hybrid Fare Negotiation & Instant Dispatch Architecture

PREPARED EXCLUSIVELY FOR (CLIENT)

PHP Movers (PHP Movers & Logistics Limited)

Attn: Executive Management & Operations Directorate

PROJECT SCOPE & TARGET PLATFORMS

Tri-Tier Mobility & Moving Ecosystem

Customer Web/PWA App + Driver Partner App + Master Admin Desk

1. EXECUTIVE SUMMARY & HYBRID ARCHITECTURE

The objective of this engagement is to deploy a dedicated on-demand moving, relocation, and freight negotiation platform custom-engineered for **PHP Movers**. Traditional ride-hailing and parcel applications fail in commercial moving because haulage jobs are fundamentally heterogeneous: transporting a single washing machine requires a different operational flow than a complete 3-bedroom apartment relocation or commercial pallet freight.

To solve this, the PHP Movers ecosystem unifies the two most proven transport models into a single operational interface:

The Bolt Model (Instant Dispatch)

Engineered for standardized, rapid dispatches (cargo vans, pickup trucks, single-item moves) with upfront automated pricing calculated by distance and vehicle category.

The inDrive Model (Fare Bidding)

Purpose-built for residential relocations and bulky freight. Customers describe items, floor level, and propose a budget. Verified movers bid and counter-offer in real time.

2. CORE PLATFORM MODULES

Module 1: Customer Moving & Freight Application (Web / Mobile PWA)

Customer Facing

- **Moving Classification:** Express Parcel/Light Haulage (Vans/Pickups), Residential Relocation (1.5-Ton to 3-Ton Trucks), and Heavy Industrial Haulage (5-Ton to 10-Ton Flatbeds).
- **Cargo Manifest Builder:** Itemized checklist (Furniture, Appliances, Boxes, Fragile Goods), floor levels, elevator availability, and photo uploads for accurate driver appraisal.
- **Dual Booking Options:** Instant automated pricing (Bolt style) or real-time fare bidding with nearby truckers (inDrive style).
- **Real-Time GPS Tracking:** Live vehicle map updates, ETA countdown, driver contact details, vehicle plate number, and mover verification badges.

- **Delivery Security OTP:** 4-digit completion code provided to customer, required by driver upon cargo offload to confirm completion and release funds.

Module 2: Driver, Trucker & Mover Partner Application (Web / Mobile PWA)

`Partner Facing`

- **Driver & Truck Onboarding:** Digital verification portal for driver license, vehicle particulars, roadworthiness certs, truck tonnage, and NUBAN bank accounts.
- **Real-Time Job Radar & Bidding Desk:** Audio/visual alerts for moving manifests in radius with full cargo preview and one-tap counter-bidding (+₦3,000, +₦5,000, +₦10,000).
- **Navigation Bridge:** One-touch handover of route coordinates to Google Maps or Waze for turn-by-turn truck navigation.
- **Move Condition Verification:** Drivers capture photo proofs of pre-existing cargo condition before loading to protect against false damage claims.
- **Earnings & Commission Wallet:** Live tracking of gross move revenues, automated commission deductions for PHP Movers, and instant NUBAN payouts.

Module 3: Central Operations & Master Admin Dashboard (PHP Movers HQ)

`Command & Control`

- **Partner Verification Desk:** Administrative verification, approval, or rejection of driver documents and vehicle inspections before granting live access.
- **Fleet Dispatch Monitor:** Live geographical control map tracking all online vehicles, active moves, loading jobs, and in-transit trucks across Nigeria.
- **Dynamic Commission & Tariff Engine:** Set base dispatch rates, per-kilometer charges, helper crew surcharges, and PHP Movers commission rates (10% to 15%).
- **Financial Ledger & Split Settlements:** Centralized accounting tracking total Gross Merchandise Value (GMV), net commission earnings, and gateway settlements.
- **Dispute & Claims Resolution:** Incident logging for transit delays, damage claims, SOS alerts, and user ratings oversight.

3. RECOMMENDED TECHNICAL ARCHITECTURE

The platform is built on an enterprise, cost-controlled stack that eliminates expensive proprietary map licensing and delivers high sub-second bidding performance:

- **Frontend PWA & Mobile APK:** Next.js (React) + Tailwind CSS, compiled as installable Progressive Web Apps (PWAs) with zero download friction and lightweight footprint.
- **Real-Time Bidding API:** Node.js (NestJS) with high-concurrency WebSockets for instant counter-offer delivery and sub-second room synchronizations.
- **Database & Caching:** PostgreSQL for relational financial ledgers and trip archives; Redis for lightning-fast live GPS coordinates and active matching rooms.
- **Cost-Controlled Maps:** Leaflet / OpenStreetMap / MapLibre routing to avoid prohibitive recurring Google Maps API bills.

4. ESTIMATED RUNNING & THIRD-PARTY OPERATIONAL COSTS

Infrastructure fees are paid directly by PHP Movers to service providers at transparent cost:

Infrastructure / Service	Operational Purpose	Estimated Initial Cost
Cloud Server (API & WebSockets)	Dedicated backend and bidding logic on Railway.app	`$5.00 - $10.00 / month`
Database & Cache (PostgreSQL + Redis)	Secure trip ledgers, user accounts, and live coordinates	`Included in cloud tier (~$5/mo)`
Custom Domain & SSL Security	phpmovers.ng / phpmovers.com with Cloudflare CDN & SSL	`~$12.00 - $20.00 / year`
SMS OTP Verification (Termii)	Phone number verification and transit security alerts	`Pay-as-you-go (~₦5.00 / SMS)`
Geospatial Routing (OSM / Leaflet)	Map rendering, route paths, and distance computation	`$0.00 (Free baseline tier)`
Payment Gateway (Paystack)	In-app customer payments and wallet top-ups	`1.5% per local transaction`
Google Play Developer Account	One-off registration fee for Android APK publishing	`$25.00 (One-time to Google)`

5. COMMERCIAL INVESTMENT & MILESTONE SCHEDULE

TOTAL PROJECT INVESTMENT

₦1,200,000

Delivery Timeline: 4 to 5 Weeks

All 3 Core Application Modules Included

Milestone	Deliverable Description	Payment Percentage & Amount
1. Mobilization Deposit	System architecture, database schema, vehicle categorization, and complete UI/UX responsive designs for Customer & Driver Apps.	`50% (₦600,000)`
2. Functional Staging	Working WebSocket bidding engine (inDrive model), automated dispatch (Bolt model), driver onboarding portal, and interactive mapping.	`30% (₦360,000)`
3. Production Handover	Live cloud production deployment, custom domain linkage, Paystack integration, Master Admin desk delivery, and 30-day warranty.	`20% (₦240,000)`

6. POST-LAUNCH WARRANTY & ACCEPTANCE

Upon production go-live, Sales Cowboy provides **thirty (30) days of complimentary technical warranty support** covering software bug resolutions, server uptime surveillance, and administrative staff onboarding.
