COMMERCIAL & TECHNICAL PROPOSAL

# Instant Property Valuation & Construction Costing Platform

Native React Native Mobile Apps (iOS & Android) with Central Operations Web Dashboard

PREPARED FOR (CLIENT / REAL ESTATE ENTERPRISE)

**Executive Real Estate & Development Directorate**

Attn: Managing Director & Investment Team

PROJECT SCOPE & DELIVERABLES

**Tri-Platform PropTech Ecosystem**

React Native iOS/Android Apps + Next.js Web Admin Console

## 1. PROJECT OBJECTIVE & STRATEGIC VISION

The objective of this engagement is to engineer, deploy, and scale an automated real estate intelligence platform that provides prospective property buyers, homeowners, developers, and investors with immediate, location-accurate financial estimates for both **existing properties** and **new construction projects from scratch**.

The platform is engineered as a high-utility tri-platform ecosystem:

**Native Mobile App (React Native)**

Published on the Apple App Store (iOS) and Google Play Store (Android). Allows investors, buyers, and field agents to run on-the-go valuations and building costings.

**Central Operations Web Dashboard**

A responsive desktop control portal built in Next.js for real estate executives to calibrate regional pricing tables, construction indexes, and review captured leads.

The platform functions as both a high-utility valuation calculator for users and an automated client-acquisition engine for the business, capturing verified contact details (WhatsApp-enabled phone numbers and emails) before unlocking complete financial reports.

## 2. FUNCTIONAL SYSTEM MODULES

### Module 1 - Track A: Existing Property Market Valuation (React Native iOS & Android)

Valuation Engine

- **Location & Regional Tiering:** State, Local Government Area (LGA), and specific neighborhood/corridor tiering (e.g., Lekki Phase 1, Ikoyi, Ikeja GRA, Guzape, Maitama, New Owerri).
- **Property Attribute Inputs:** Building typology (Duplex, Semi-Detached, Terraced House, Multi-Family Flats, Commercial Space), land size, room counts, building age, finishing standard, and land title classification (C of O, Governor's Consent, Gazette, Deed of Conveyance).
- **Automated Computation:** Delivers estimated current market resale value, anticipated annual rental income yield, and average capital payback duration based on regional baseline data.

### Module 1 - Track B: New Build Construction Cost Estimator / Digital BOQ

`BOQ Engine`

- **Building Typology Configuration:** Selection of architectural typology (e.g., 4-Bedroom Detached Duplex, 2-Storey Block of 6 Flats, 3-Bedroom Bungalow).
- **Construction Scope Parameters:** Floor area / square meter footprint, foundation type (standard strip vs raft/piling), and finishing tier (Economy, Executive, Luxury).
- **Milestone Cost Breakdown:** Itemized estimates across: 1. Substructure & Foundation, 2. Frame & Superstructure, 3. Roofing & Carcass, 4. MEP Rough-ins, 5. Interior & Exterior Finishes.

### Module 2: Lead Generation & Report Delivery Gate

`Lead Engine`

- **Instant On-Screen Summary:** Displays baseline valuation and construction cost ranges directly on the mobile screen.
- **Lead Capture Gate:** Unlocking the complete financial summary and itemized cost breakdown requires the user's Full Name, Phone Number (WhatsApp-enabled), and Email Address.
- **Downloadable Assessment Summary:** Automatically compiles the generated figures into a clean, branded digital summary sheet for the user.
- **Instant WhatsApp Action:** One-tap action button allowing the user to initiate a direct WhatsApp conversation with your sales team regarding their specific calculation.

### Module 3: Master Administrative Web Dashboard (Next.js Web Portal)

`Control Console`

- **Rate & Price Configuration Desk:** Simple admin forms to update localized square-meter valuation rates and construction material index prices (cement, rebar, granite, labor rates per LGA) without writing code.
- **Lead Vault & CRM Integration:** Centralized table recording every assessment run, user contact details, selected property specs, and estimated values.
- **Data Export:** One-click CSV export of captured leads for marketing campaigns, CRM syncing, and telephone follow-ups.

## 3. PROPOSED TECHNICAL ARCHITECTURE

The platform combines native cross-platform mobile fluidity on iOS and Android with an enterprise cloud backend:

- **Native Mobile Applications (iOS & Android):** Developed natively in **React Native** (TypeScript). Compiles to native binary packages for the Apple App Store and Google Play Store, providing smooth animations, offline storage, and responsive UI.
- **Web Operations Console:** Built using **Next.js (React)** styled with Tailwind CSS, providing a responsive control portal for desktop and tablet users.
- **Backend API & Calculation Engine: Node.js** server actions and RESTful API endpoints for high-speed algorithmic execution and minimal latency.
- **Database & Storage: PostgreSQL** relational database for immutable valuation logs, lead captures, and regional tariff matrices.
- **Hosting & CDN:** Deployed on **Railway / Cloudflare Edge**, ensuring high availability, fast response times, and automated SSL encryption.

## 4. ESTIMATED THIRD-PARTY OPERATIONAL COSTS

Third-party infrastructure and store fees are paid directly by the client to service providers at transparent cost:

| Infrastructure / Service | Operational Purpose | Estimated Initial Cost |
|---|---|---|
| **Cloud Hosting & Database (Railway.app)** | Runs API backend, stores calculation logs and lead vault | `$5.00 - $10.00 / month` |
| **Custom Domain & SSL Protection** | Brand domain name (.com or .ng) with Cloudflare SSL | `~$15.00 - $25.00 / year` |
| **Transactional Email Dispatch (Resend / SES)** | Automated email delivery of valuation summary reports | `Free tier (up to 3,000 emails / month)` |
| **Apple Developer Program (iOS App Store)** | Annual Apple Developer Account fee to publish on iOS | `$99.00 / year (Direct to Apple)` |
| **Google Play Console Account (Android)** | One-time registration fee to publish on Google Play Store | `$25.00 (One-off to Google)` |

## 5. COMMERCIAL INVESTMENT & PAYMENT TERMS

TOTAL PROJECT INVESTMENT

**₦850,000**

**Delivery Timeline: 3 to 4 Weeks**

React Native iOS/Android Apps + Web Admin Dashboard

| Milestone | Deliverable Description | Payment Percentage & Amount |
|---|---|---|
| **1. Mobilization Deposit** | Technical system architecture, database schema design, algorithmic costing models, and complete UI/UX responsive designs for React Native mobile app and Web Dashboard. | `50% (₦425,000)` |
| **2. Functional Staging Milestone** | Deployment of the dual estimation engine, dynamic questionnaire, lead capture gate, and admin rate adjustment panel on staging. | `30% (₦255,000)` |
| **3. Production Handover & Go-Live** | Live production deployment, custom domain connection, App Store / Play Store binary submission handover, staff training, and administrative handover. | `20% (₦170,000)` |

## 6. POST-LAUNCH WARRANTY & ACCEPTANCE

Following production handover, Sales Cowboy provides **thirty (30) days of complimentary technical warranty support** covering software bug resolutions, server uptime surveillance, and administrative staff onboarding.
