COMMERCIAL & TECHNICAL PROPOSAL

Custom Ride-Hailing Platform Ecosystem

Native React Native Mobile Apps (iOS & Android) with Central Operations Web Dashboard

PREPARED FOR (CLIENT / MOBILITY ENTERPRISE)

Executive Transport Directorate

Attn: Managing Director & Operations Team

PROJECT SCOPE & DELIVERABLES

Tri-Platform Mobility Suite

React Native iOS/Android Apps + Next.js Web Admin Console

1. EXECUTIVE SUMMARY & ECOSYSTEM ARCHITECTURE

The objective of this engagement is to design, develop, deploy, and launch a complete enterprise on-demand ride-hailing and mobility ecosystem engineered for rapid dispatch, real-time driver tracking, and commercial fleet management.

The ecosystem is engineered across three native and web pillars:

Native Mobile Apps (React Native)

Dedicated high-performance mobile applications for both Passengers and Drivers, compiling to native binaries for Apple iOS (App Store) and Google Android (Google Play).

Web Operations Console (Next.js)

A centralized desktop and tablet web dashboard for fleet managers to monitor live dispatches, audit driver KYC, configure dynamic tariffs, and manage payouts.

2. CORE PLATFORM MODULES

Module 1: Passenger Application (Native React Native: iOS & Android)

iOS & Android App

- **Onboarding & Authentication:** Phone number verification via SMS OTP (Termii), profile setup, and saved destination shortcuts (Home, Work, Frequent Spots).
- **Booking & Fare Estimation:** Interactive pickup/drop-off selection, real-time automated fare calculation based on distance and travel time, and ride tier selection (Standard, Comfort, XL).
- **Live Driver Matching & Geospatial Tracking:** Proximity-based dispatch matching rider with nearest online driver, smooth real-time vehicle map tracking, and live ETA countdown.
- **Safety & Start-of-Trip OTP:** Driver photo, full name, phone contact, vehicle details, 4-digit security pickup OTP verification, and in-app call/chat button.
- **Ratings & Digital Receipts:** Two-way rating and feedback system, and automatic digital trip receipts delivered in-app.

Module 2: Driver Partner Application (Native React Native: iOS & Android)

`iOS & Android App`

- **Driver Onboarding & KYC:** Digital compliance portal collecting driver license, vehicle registration particulars, roadworthiness certificates, and verified bank account details (NUBAN) for automated payouts.
- **Dispatch & Trip Acceptance Terminal:** One-tap Online/Offline duty toggle, high-priority audio/visual alerts for incoming ride requests within radius, destination preview, and countdown timers.
- **Turn-by-Turn Navigation Bridge:** Instant one-tap handover passing pickup and drop-off coordinates directly into Google Maps or Waze on the driver's phone.
- **Driver Wallet & Financial Ledger:** Daily/weekly earnings summary, trip logs, real-time platform commission deduction tracking (for cash or card trips), and direct bank payout requests.

Module 3: Central Operations & Master Admin Dashboard (Next.js Web Portal)

`HQ Web Dashboard`

- **Driver Vetting & Approval Desk:** Review, verify, approve, or reject new driver registrations and inspect uploaded vehicle particulars before granting platform dispatch access.
- **Live Fleet & Dispatch Monitor:** Interactive administrative map view displaying all active trips, en-route drivers, and online vehicle density across operational zones.
- **Fare Matrix & Commission Control:** Configure base fares, per-kilometer rates, per-minute wait time fees, surge pricing multipliers, and platform commission percentages (10% to 15%).
- **Finance, Disputes & Incident Logs:** Comprehensive transaction ledgers, trip dispute resolution desk, user deactivation controls, and safety/SOS logs.

3. PROPOSED TECHNICAL ARCHITECTURE

The platform combines native cross-platform mobile fluidity with an enterprise high-throughput backend:

- **Native Mobile Applications (iOS & Android):** Developed natively in **React Native** (TypeScript), compiling to native binaries for the Apple App Store and Google Play Store with full native hardware sensor support (GPS, background notifications).
- **Web Operations Console:** Built using **Next.js 15 (React)** styled with Tailwind CSS, providing a responsive control portal for desktop and tablet users.
- **Backend API & Real-Time Engine: Node.js (NestJS)** with high-throughput **WebSockets** for sub-second driver location pings, dispatch matching, and immediate state updates.
- **Database & Caching Tier: PostgreSQL** for immutable financial ledgers and trip archives; **Redis** for sub-second driver location caching and active booking sessions.
- **Cost-Controlled Geospatial Mapping:** Open-source tile rendering and routing engines (OpenStreetMap / Leaflet / Mapbox SDK bridges) to eliminate prohibitive third-party map API bills.

4. ESTIMATED RUNNING & OPERATIONAL COSTS

Third-party infrastructure and store fees are paid directly by the client to service providers at transparent cost:

Infrastructure / Service	Operational Purpose	Estimated Initial Cost
Cloud Application Server (Backend API)	Runs core backend logic and WebSockets on Railway.app	`$10.00 - $20.00 / month`
Database & Cache (PostgreSQL + Redis)	Stores user accounts, trip ledgers, and live sessions	`Included in cloud tier (~$10/mo)`
Custom Domain & SSL Protection	Brand domain name (.com or .ng) with Cloudflare CDN & SSL	`~$15.00 - $25.00 / year`
SMS OTP Phone Verification (Termii)	User and driver account verification via SMS gateway	`Pay-as-you-go (~₦5.00 per SMS)`
Payment Gateway Integration	Paystack or Moniepoint for in-app wallet top-ups	`1.5% per local transaction`
Apple Developer Program (iOS App Store)	Annual Apple Developer fee to publish on iOS App Store	`$99.00 / year (Direct to Apple)`
Google Play Console Account (Android)	One-time fee to publish Android apps on Google Play	`$25.00 (One-time to Google)`

5. COMMERCIAL INVESTMENT & PAYMENT SCHEDULE

TOTAL PROJECT INVESTMENT

₦2,000,000

Delivery Timeline: 6 Weeks

React Native iOS/Android Apps + Web Admin Dashboard

Milestone	Deliverable Description	Payment Percentage & Amount
1. Mobilization Deposit	System architecture, database schema, native mapping setup, and complete UI/UX responsive designs for both Rider and Driver React Native apps.	`40% (₦800,000)`
2. Functional Staging Milestone	Working React Native iOS/Android builds on staging, live WebSocket ride matching, map tracking, and driver acceptance workflows.	`40% (₦800,000)`
3. Production Handover & Go-Live	Final production deployment, Web Admin Dashboard delivery, Paystack integration, App Store / Play Store binary submission handover, and documentation.	`20% (₦400,000)`

6. POST-LAUNCH WARRANTY & ACCEPTANCE

Following production handover, Sales Cowboy provides **thirty (30) days of complimentary technical warranty support** covering software bug resolutions, server uptime surveillance, and administrative staff onboarding.
