HEALTHCARE SYSTEMS ENGINEERING PROPOSAL

On-Demand Home Healthcare & Doctor Dispatch Platform

Integrated Patient Web/PWA App, Medical Practitioner Portal & Central Operations Dashboard

PREPARED FOR (CLIENT / HEALTHCARE ENTERPRISE)

Executive Healthcare Directorate

Attn: Managing Director & Clinical Operations Team

PROJECT SCOPE & DELIVERABLES

Tri-Platform Telemedicine Ecosystem

Patient Booking App + Medical Provider Portal + Master Admin Desk

1. EXECUTIVE SUMMARY & CLINICAL OBJECTIVES

The objective of this engagement is to engineer and deploy a specialized on-demand home healthcare and medical practitioner dispatch platform. Traditional outpatient hospital visits in Nigerian urban centers are severely burdened by traffic gridlock, long queue times, and overcrowded clinical waiting rooms. For working professionals, elderly parents, chronic illness patients, and mothers with young children, visiting a hospital for routine checkups, nursing care, lab sample collection, or physiotherapy is exhausting and stressful.

This platform bridges that gap by enabling patients and families to easily browse, book, schedule, and pay for accredited medical personnel (general practitioners, registered nurses, certified physiotherapists, and phlebotomists / lab technicians) to deliver healthcare directly in their homes.

The ecosystem provides an intuitive, friction-free booking flow for patients while offering medical professionals clear visit itineraries, automated fee collection, and giving the business owner comprehensive clinical oversight and commission tracking.

2. CORE PLATFORM MODULES

Module 1: Patient Application (Mobile-Responsive Web / PWA)

Patient Facing

- **Service Selection Catalog:** Browse available home visit services (e.g., General Consultation, Nursing Care, Blood Sample Collection/Lab Tests, Physical Therapy, Elderly Care).
- **Home Service Booking Flow:**
  - Select preferred clinical service and medical specialist type.
  - Enter home address, landmark, and contact details with location mapping.
  - Pick an immediate dispatch or schedule a specific date and time slot.
  - Input primary symptoms, allergies, or medical notes for the attending practitioner.
- **Upfront Digital Payments:** Secure payment integration via Paystack and Moniepoint (Card, Bank Transfer, USSD) to confirm and lock in appointments.

- **Booking Status & History:** Real-time tracking of request status (`Pending Assignment`, `Practitioner Assigned`, `Practitioner En Route`, `Visit in Progress`, `Completed`), complete with past clinical visit logs.

Module 2: Medical Practitioner Portal (Web / Mobile Interface)

`Practitioner Facing`

- **Practitioner Onboarding & Vetting:** Profile submission collecting license numbers, professional credentials (MBBS, Nursing council certs), ID verification, and bank details for payouts.
- **Duty Toggle & Dispatch Desk:**
  • Toggle availability (`Online` / `Offline`).
  • Receive real-time notifications for new home service requests within their coverage area.
  • Accept or decline requests with full access to patient address and initial visit notes.
- **Visit Completion & Notes:** Mark appointments as completed and record clinical summary notes, vital signs, and treatment logs for follow-up.
- **Earnings Summary:** View completed visits and accumulated earnings with automated payout requests to their registered Nigerian bank account.

Module 3: Central Administrative Dashboard (HQ Control Desk)

`Command & Control`

- **Medical Staff Credential Verification:** Audit and approve or reject healthcare provider registrations and license validity before they can take home visits.
- **Central Dispatch & Booking Calendar:** Master dashboard showing all scheduled, active, and completed home visits across operational coverage zones.
- **Financial Ledger & Commissions:** Automated calculation of platform service commissions per home visit, payout tracking, and gross revenue reports.
- **Customer Support & Record Logs:** Manage patient inquiries, handle rescheduled bookings, and inspect visit completion logs and clinical summaries.

3. PROPOSED TECHNICAL ARCHITECTURE

The platform is engineered on an enterprise, cost-controlled stack that delivers high clinical data security, fast responsiveness, and zero app store download barriers:

- **Frontend Apps (Patient & Practitioner):** Built using **Next.js (React)** with Tailwind CSS, delivered as an installable **Progressive Web App (PWA)**. Works smoothly on any smartphone (Android/iOS) without requiring immediate App Store submissions or large downloads.
- **Backend API & Workflows: Node.js (NestJS)** deployed on lightweight cloud infrastructure to manage secure data access, status state machines, and real-time notifications.
- **Database & Storage: PostgreSQL** for patient and practitioner records, with encrypted medical notes and file storage.
- **Automated Alerts:** Real-time SMS and WhatsApp notifications (via Termii) for appointment confirmations, practitioner en-route updates, and completion receipts.

4. ESTIMATED RUNNING & THIRD-PARTY COSTS

Third-party infrastructure fees are paid directly by the client to service providers at transparent cost:

Infrastructure / Service	Operational Purpose	Estimated Initial Cost
Cloud Hosting & Backend API (Railway.app)	Runs core backend server, database, and dispatch workflows	`$5.00 - $10.00 / month`
Database Storage (PostgreSQL)	Encrypted clinical records, user accounts, and visit ledgers	`Included in cloud tier (~$5/mo)`
Domain Name & SSL Security (.ng / .com via Cloudflare)	Custom domain with Cloudflare SSL certificate & DDoS shield	`~$12.00 - $20.00 / year`
SMS Alerts & OTPs (Termii)	Appointment confirmations and practitioner arrival alerts	`Pay-as-you-go (~₦5.00 / SMS)`
Payment Gateway (Paystack / Moniepoint)	Upfront patient booking payments and practitioner payouts	`1.5% per local transaction`

5. COMMERCIAL INVESTMENT & DELIVERY TIMELINE

TOTAL PROJECT INVESTMENT

₦650,000

Delivery Timeline: 3 to 4 Weeks

All 3 Core Application Modules Included

Milestone	Deliverable Description	Payment Percentage & Amount
1. Mobilization Deposit	Paid at project kick-off; covers database schema design, architecture setup, and patient booking flow.	`50% (₦325,000)`
2. Staging Milestone	Paid upon delivery of the practitioner portal, dispatch mechanism, and payment integration on staging.	`30% (₦195,000)`
3. Handover & Go-Live	Paid upon production deployment, domain setup, payment gateway live testing, and admin handover.	`20% (₦130,000)`

6. POST-LAUNCH WARRANTY & ACCEPTANCE

Upon production go-live, Sales Cowboy provides **thirty (30) days of complimentary technical warranty support** covering software bug resolutions, server uptime surveillance, and administrative staff onboarding.
